

# The “FTA” Series Drum Handlers From Liftomatic—Model 1 & 2-FTA Parrot-Beak® Equipment Designed to Safely and Efficiently Move Closed Top Steel and Plastic drums!

DRUM HANDLING TECHNOLOGY FROM LIFTOMATIC MATERIAL  
HANDLING, INC. SAFE DRUM HANDLING SINCE 1947!

Liftomatic drum handling technology has been industry tested and proven since 1947! The FTA series drum handlers can pick up and move closed top steel or plastic drums safely and efficiently. The FTA series has been a standard product in our line since the early 1950's. This

unit has been heavily relied upon for over 70 years! Standard FTA units will slide onto the forks of nearly any forklift and can handle one or two drums at a time. Each fork-mounted unit will come standard with a safety chain to connect to the forklift. The “Parrot-Beak” clamping system will

securely engage each drum in one place on the top chime offering an effective grip on every drum! This product is ideal for routine handling and transportation of drums on smooth warehouse floors, loading and unloading drums from pallets, or staging product for shipment. Cushioned belt-cradles on all FTA units protect the drum's sidewall during the pick-up and transport process.
